APPLICATION FOR PERMIT

TO APPROPRIATE THE PUBLIC WATERS OF THE STATE OF NEVADA

Date of filing in State Engineer's Office JAN 2 5 1985			
Retu	rned to applicant for correction		
	ected application filed		
Map filed FEB 06 1985 under 48768			
	The applicant Robert E. Meyer		
1/			
	132 East Firestone Blvd., of Santa Fe Springs. Street and No. or P.O. Box No. City of Town 1 i form in 2, 00670. hereby make a application for permission to appropriate the public.		
	1 i fornia 90.6.70 hereby make s application for permission to appropriate the public State and Zip Code No. rs of the State of Nevada, as hereinafter stated. (If applicant is a corporation, give date and place of incorpora-		
tion;	if a copartnership or association, give names of members.)		
1.	The source of the proposed appropriation is <u>Underground</u> Name of stream, lake, spring, underground or other source		
2. The amount of water applied for is 3.34 c.f.s. One second-foot equals 448.83 gals. per min.			
	(a) If stored in reservoir give number of acre-feet.		
3.	. The water to be used for mining, milling & domestic. Irrigation, power, mining, manufacturing, domestic, or other use. Must limit to one use.		
	Irrigation, power, mining, manufacturing, domestic, or other use. Must limit to one use. If use is for:		
	(a) Irrigation, state number of acres to be irrigated		
	(b) Stockwater, state number and kinds of animals to be watered		
(c) Other use (describe fully under "No. 12. Remarks"			
	(d) Power: (1) Horsepower developed		
	(2) Point of return of water to stream		
5.			
	Describe as being within a 40-acre subdivision of public transport		
	survey, and by course and distance to a section corner. If on unsurveyed land, it should be so stated.		
6.	Place of use All of Sections 19, 20, 8, 29; F1 of Section 30, T. 33N., Describe by legal subdivision. If on unsurveyed land, it should be so stated.		
	Describe by legal subdivision. If on unsurveyed land, it should be so stated. R.36E., M.D.B. & M.		
•	,		
7.	Use will begin about January 1st and end about December 31st, of each year. Month and Day Month and Day		
8.	The state of the s		
-	specifications of your diversion or storage works) Well. DUMD. Motor, Dipelines		
	State manner in which water is to be diverted, i.e. diversion structure, ditches and		
9)	flumes, drilled well with pump and motor, etc. Estimated cost of works \$30,000.00		

10.	Estimated time required to construct works 3 years	If well completed, describe works.	
	•		
11.	Estimated time required to complete the application of water to beneficial use 5 years		
12.	Remarks: For use other than irrigation or stock watering, state number and type of units to be served or annual consumptive use.		
	Water Usage: See Attached.

DF APPLICANT TO COMPLY WITH THE PROVISIONS OF PERMIT

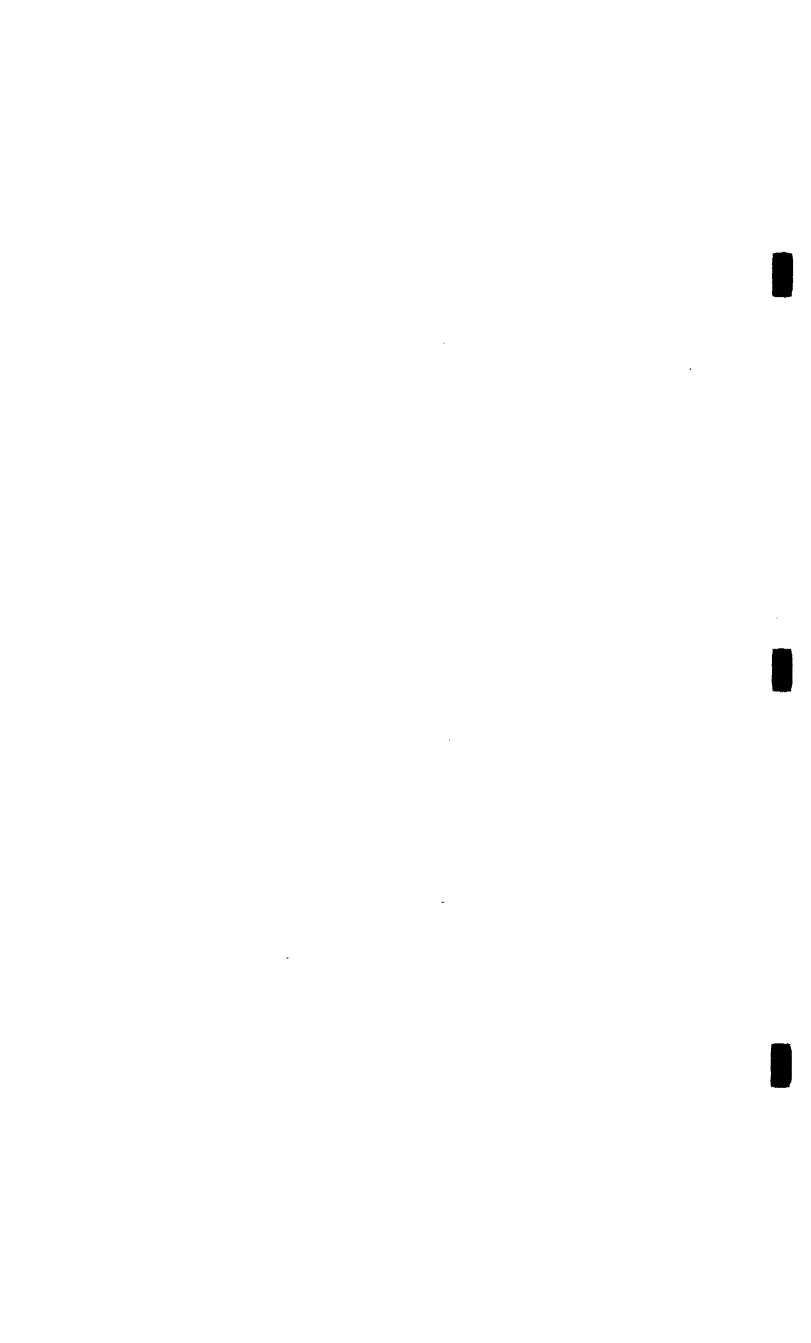

Page 2

(PERMIT TERMS CONTINUED)

The total combined duty of water under Permits 46712, 46925, 46926, 46927, 46929, 46930, 46931, 48769, 48770, 48771, 48772, 48773, 48774, 48775 and 48776 shall not exceed 288.75 million gallons annually.

This permit is issued under the preferred use provisions of NRS Chapter 534. The manner of use of water under this permit is by nature of its activity a temporary use and any application to change the manner of use granted under this permit will be subject to additional determination and evaluation with respect to the permanent effects on existing rights and the resource within the ground water basin

The issuance of this permit does not waive the requirements that the permit holder obtain other permits from State, Federal and local agencies.

Water Usage:

per year

5,000 G.P.M. = 300,000 gallon per hour
10 hour per day x 300,000 gallon = 3,000,000 gallon per day
3,000,000 gallon per day x 25 days month = 75,000,000 gallon
 per month
75,000,000 gallon per month x 11 months = 825,000,000 gallon

Anticipated water loss factor is 35% of total water usage. Considering this formula make up, water per hour is 105,000 gallons.

per day - 1,500,000 gallon per month - 26,250,000 gallon per year - 288,750,000 gallon

Our plant is designed to run 1,000 yards per hour of bank run ore to be washed and processed.

Our recycling and conservation of water plans are the following:

- Two to three settling ponds to catch run off water from our washing plant.
- 2. Sand screws to remove excess water from processed gravels.
- If economics allow, cyclones to remove silts and conserve on water.

A number of variables to the above plan is:

- That our plant has capabilities of running up to 1,500 yd.
 per hour under ideal material condition (i.e.-not too
 much clay, favorable % ratio of fines to larger rock,
 etc.)
- That during long, hot summer months we would run two 8 hour shifts instead of a 10 hour shift, more water usage.
- 3. The heat of an extra hot or extra dry summer could consume through evaporation, a figure higher than 35% water loss.

Thank you,
